

More chat rooms...

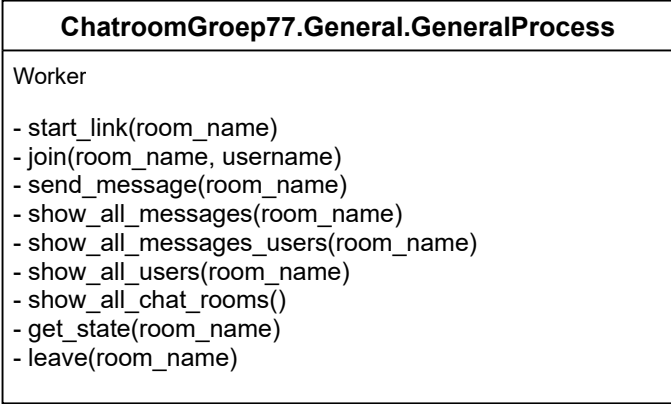

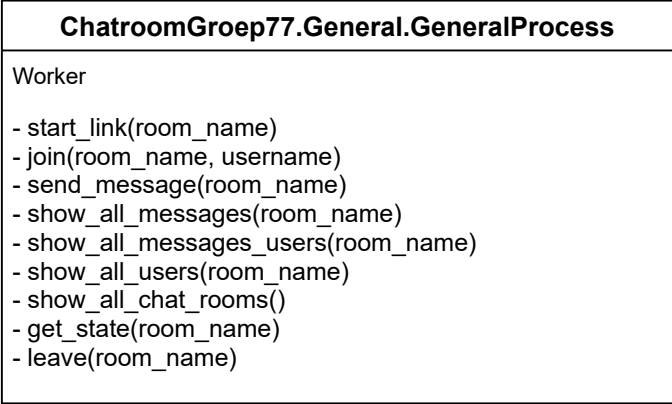

Example

using the 'create' action
will run the run_setup what will
make a new general process aka.
chat room

Example

join() will execute
the join(room_name, username)
and the node will search for the
global registered chat room
and he will try to join it.

Automatic Clustering / Connection
with different nodes with the
dependency Libcluster. Here are
the options with Gossip (udp
packets) or Localdmp (only local
network)
